Gwynedd Mercy University-School of Business & Education
(*Must be used for each lesson observed by University Supervisor*)
Lesson Plan Framework

Subject Area: Life Skills Math **Grade Level: 9-12**

Student Name: Grace Dittman

Domain I: Planning and Preparation
PA Standard(s): • PA Core Mathematics CC.2.1.HS.F.6: Extend the knowledge of numbers and their uses to connect mathematics to everyday situations. • PA Core Mathematics CC.2.2.HS.D.10: Represent, solve, and interpret real-world problems using mathematical reasoning. • Career Education and Work connections: Students practice functional problem solving, following sequential directions, communication, and independent task completion.
Essential Question(s): Students will consider and reflect on throughout the lesson: How can patterns and problem-solving help me make decisions? How can I use addition and subtraction to solve real-world problems? Why is it important to look carefully at information before choosing an answer?
Objectives/Performance Expectations What will students know and be able to do as a result of this lesson? By the end of the lesson, students will: Identify what comes next in a visual pattern by examining pictures and selecting the correct next item. Use addition and subtraction to solve a functional word problem involving cars in a parking lot. Combine quantities to determine a total when two groups of cars are added together. Use subtraction to determine an unknown quantity when a total and one quantity

are provided. Communicate answers using speech, AAC, gestures, pointing, writing, or another established communication method. Follow turn-taking and classroom routines while participating in the warm-up. Demonstrate approximately 80% accuracy, with individualized prompting and accommodations as appropriate	
Assessment Evidence/Level of Learning Students will show what they know by evidence of/list names of formative or summative checks, quizzes, tests which indicate evidence of learning: • Teacher observation during the picture-pattern warm-up, including number/visual recognition, reasoning, and response selection. • Student responses to pattern questions and ability to identify the item that comes next. • Observation of students solving the car word problem using addition and subtraction. • Students' ability to combine red and white cars and identify totals. • Students' ability to use subtraction to determine how many red cars are in the parking lot when appropriate information is provided. • Observation of communication, turn-taking, attention, independence, and response to prompting. • IXL progress-monitoring data collected by the TA during the assigned station. • Observation of Digitability participation/navigation and UNO participation, turn-taking, and following directions. • Closure response demonstrating one idea or skill learned during the lesson.	**Differentiated Instruction**: Modifications in instruction and assessment for students with learning differences, specifically those with 504's and IEP's. Extensions/Enrichment in instruction and assessment for students who are above grade level and/or gifted. For Group 1, use clear picture patterns with a limited number of choices and visual answer options. For students who use AAC, allow students to respond with their AAC device; the teacher may model relevant words or responses on an AAC device. Provide extended processing and wait time before repeating a question or providing a prompt. For Group 2, present the car problem using visual representations of red and white cars so students can connect quantities to the written problem. Break multi-step word problems into smaller steps: identify the information, choose addition or subtraction, solve, and state the answer.

	Use concrete/visual supports such as drawn cars, counters, or a whiteboard number line when needed. Use least-to-most prompting and fade prompts when students demonstrate independence. Provide individualized IXL assignments and accommodations based on student needs and IEPs. Increase pattern complexity or problem-solving demands for students who demonstrate mastery. Use visual schedules and timers to support transitions and predictability. Provide positive reinforcement, including dollar bills/fake money, for participation, communication, effort, following directions, and increasing independence.

Domain II: Classroom Environment:

Describe Classroom/Behavior Management Plan & Routines

- Students enter, gather materials, and follow the posted visual schedule.
- The teacher reviews expectations and uses the established greeting routine. For Group 1, AAC modeling may be used as appropriate.
- Students are reminded of the turn-taking expectation: participate when called, listen while peers respond, and wait for the next turn.
- The teacher provides calm, concise directions and additional processing time as needed.
- Dollar bills/fake money are used as established positive reinforcement for participation, communication, effort, following directions, and independence.

- A snack/break occurs between the two groups, followed by a brief transition.
- A timer on the board is used to make warm-up, station, and transition expectations predictable.
- During stations, students remain with their assigned adult/activity until the timer or teacher signals a transition.
- Students receive individualized communication, sensory, behavioral, and instructional supports consistent with their established classroom routines and IEP accommodations.

Domain III: Instruction

Activate Prior Knowledge/Motivation:
Preparing students for the lesson: How will you activate prior knowledge, build background, or review previous lessons as well as motivate students for the lesson?

Review that a pattern is something that follows a rule or repeats in a predictable way.
Ask students where they see patterns in everyday life, such as clothing, signs, schedules, colors, or classroom routines.
Review the meanings of addition (putting groups together) and subtraction (taking away or finding how many are left/different).
Connect the car problem to a familiar real-world situation: counting cars in a parking lot.
Explain that today's warm-up is Think About It Thursday because students will need to look carefully, think about the information given, and choose a solution.

Materials Needed:

Math folders
Whiteboard and dry-erase markers
Projection screen/slideshow
Visual schedule
AAC devices as applicable
FM device as applicable
Visual picture-pattern slides/worksheets
Car word-problem visual with red and white car representations
Timer
Dollar bills/fake money for positive reinforcement
Laptops
IXL
Digitability/Bankability
UNO cards

Vocabulary (New or Review):

pattern, next, repeat, picture, sequence, rule, addition, add, plus, combine, total,

subtraction, subtract, take away, difference, how many, red, white, car, parking lot, answer

Sequence of the Lesson:
What learning activities/strategies will you use to engage the students in the learning? What will students do to use and apply new concepts or skills (independent practice if relevant)? How will you monitor and guide their performance? Include relevant vocabulary. Use bullets to sequence your lesson.

0–5 minutes — Entry Routine
Students enter, get materials, and review the visual schedule. Teacher greets students and reviews expectations. For Group 1, teacher may model a greeting or functional response using an AAC device as appropriate.
5–10 minutes — Mindfulness / Expectations
Complete the established brief mindfulness activity. Review that today's warm-up is Think About It Thursday and remind students to look carefully, think, and take their time before answering.
10–25 minutes — Group 1 Warm-Up: Visual Patterns
Display picture patterns on the board. Students examine each pattern and choose what comes next. Teacher models the first example by identifying what repeats or changes. Students take turns responding. Students may come to the board, point to an answer, verbally respond, use AAC, or use another established communication method. Provide extended processing time and least-to-most prompting. Reinforce participation and effort.
25–35 minutes — Group 1 Review / Pattern Questions
Review the patterns and ask questions such as: What comes next? What picture repeats? How did you know? Which answer does not belong? Encourage students to explain or demonstrate their reasoning at their individual communication level.
35–45 minutes — Snack / Break / Transition
Students have the established snack and break. Teacher prepares materials for the next group.
45–50 minutes — Group 2 Entry Routine
Second group enters, follows the visual schedule, gathers materials, and reviews classroom expectations.
50–55 minutes — Mindfulness / Addition and Subtraction Review
Complete the established brief mindfulness activity. Review that addition means combining groups and subtraction can be used to take away or find an unknown amount.
55–70 minutes — Group 2 Warm-Up: Car Word Problem
Present a visual word problem about red and white cars in a parking lot. Read the problem aloud and display the quantities visually. Guide students through the problem one step at a time: identify the number of red cars, identify the number of white cars, determine whether to add or subtract, solve, and state the answer. Students may use drawings, counters, fingers, a calculator when appropriate, or the teacher's visual model. Ask follow-up questions that require combining groups, such as how many red and white cars there are altogether.
70–80 minutes — Group 2 Problem-Solving Review
Review the solution and ask students additional questions about the parking lot. Examples include: How many red cars are there? How many white cars are there?

How many red and white cars are there altogether? If some cars leave, how many are left? If you know the total and the number of white cars, how could you find the number of red cars? Use visuals and concrete representations to support students who need them.

80–85 minutes — Daily Station

Students complete one assigned station for the day. Station 1: IXL/progress monitoring with a TA. Station 2: Digitability with the teacher, including logging in and practicing the assigned activity. Station 3: UNO with a TA, focusing on turn-taking, following directions, communication, and social interaction. Use the board timer to support station expectations.

85–90 minutes — Closure

Review the Think About It Thursday skills. Ask students to identify one pattern they completed or one thing they learned about addition/subtraction. Students respond verbally, with AAC, by pointing, or through another established communication method. Preview the next class routine and reinforce students for participation and effort.

Closure: What will you do to bring closure to the lesson? How will you summarize this lesson and preview the lesson that will follow?

85–90 minutes — Closure

Review the Think About It Thursday skills. Ask students to identify one pattern they completed or one thing they learned about addition/subtraction. Students respond verbally, with AAC, by pointing, or through another established communication method. Preview the next class routine and reinforce students for participation and effort

Reflection Guidelines

The student will write lesson plans with an eye to the Danielson Framework and the Four Domains of Professional Practice. Use this as a resource when writing lesson plans.

Domain I Planning and Preparation

1. How do you know you were knowledgeable of your content?
2. What is the evidence that your objective was clear in the lesson plan?
3. How does the lesson address individual student learning needs?
4. What variety of strategies and methodologies did you consider when planning?
5. What is the evidence that lesson components were logically sequenced?
6. How did your lesson plan include checks for student understanding?
7. What PA Standards did this lesson address?

Domain II Classroom Environment

1. How did students know the behavioral and academic expectations for the lesson?
2. What effective routines and procedures did you implement for lesson efficiency?
3. How did you insure the classroom was physically accessible for all learners?
4. What evidence indicates that respect was shown between and among students and teacher?
5. What evidence indicates that students placed a high value on quality participation, process, and product?
6. How do you assess if the lesson was attainable for all students but also had appropriate rigor?

Domain III Instructional Delivery

1. How did you align your lesson to PA Standards?
2. How did you insure a clearly stated objective, understood by learners?
3. How did you provide clear explanations as to how to proceed through the lesson?
4. What questioning and discussion techniques insured all-learner participation?

5. What strategies did you employ to engage all students?
6. Describe how you made the content meaningful due to sequencing and pacing.
7. Discuss how you checked for understanding, provided feedback, retaught.
8. What is the evidence that you were you flexible and responsive to the needs of the learners?
9. Describe how you made meaning of the lesson with some form of closure activity.

Overall Assessment

Briefly state any changes you will make the next time you teach this lesson or activity, to improve any of the Domains of Professional Practice.
