Gwynedd Mercy University-School of Business & Education
(*Must be used for each lesson observed by University Supervisor*)
Lesson Plan Framework

Subject Area: Learning Support Math **Grade Level: 9**

Student Name: Grace Dittman

<table>
<tr><th colspan="2">Domain I: Planning and Preparation</th></tr>
<tr><td colspan="2">PA Standard(s):

• CC.2.2.7.EE.A.1 (foundational skill per IEP goals): Apply properties of operations, including the distributive property, to expand and simplify linear expressions.

• CC.2.2.8.B.3 / 8.EE.C.7 (foundational skill per IEP goals): Solve linear equations in one variable, including equations with variables on both sides.</td></tr>
<tr><td colspan="2">Essential Question(s):
Students will consider and reflect on throughout the lesson:

• How does the distributive property help us simplify an expression?

• How do we solve an equation when there are variables on both sides?</td></tr>
<tr><td colspan="2">Objectives/Performance Expectations
What will students know and be able to do as a result of this lesson?

• Students will simplify expressions using the distributive property in a warm-up.

• Students will finish practicing the distributive property.

• Students will take guided notes on solving equations with variables on both sides and work through the examples.</td></tr>
<tr><td>Assessment Evidence/Level of Learning
Students will show what they know by evidence of/list names of formative or summative checks, quizzes, tests which indicate evidence of learning:

• Distributive property warm-up responses (4 questions)

• Completed distributive practice</td><td>Differentiated Instruction:
Modifications in instruction and assessment for students with learning differences, specifically those with 504’s and IEP’s. Extensions/Enrichment in instruction and assessment for students who are above grade level and/or gifted.

• Warm-up displayed on the board and provided on paper so students can follow</td></tr>
</table>

• Completed variables on both sides notes and examples	along in the format that works best for them • Warm-up and notes examples completed together before independent work • Distributive practice finished first so students build confidence with the previous skill before new content begins • Teacher support available throughout the practice and notes

Domain II: Classroom Environment:

Describe Classroom/Behavior Management Plan & Routines

• Visual schedule displayed showing today's activities

• Clear verbal and visual cues signal transitions between activities

• Consistent routine carried over from the previous distributive property lessons

Domain III: Instruction

Activate Prior Knowledge/Motivation:

• (0-10 min) Distributive property warm-up: 4 questions displayed on the board, with a paper version for each student. The class works through the questions together.

Materials Needed:

• Distributive property warm-up (on the board and paper copies, 4 questions)
• Distributive practice (from the previous class)
• Variables on both sides guided notes
• Visual schedule (board/projector)
• Pencils, calculators

Vocabulary (New or Review):

• Distributive property — review
• Variable — a letter that represents an unknown or changing number
• Inverse operations — review
• Like terms — review

Sequence of the Lesson:

What learning activities/strategies will you use to engage the students in the learning? What will students do to use and apply new concepts or skills (independent practice if relevant)? How will you monitor and guide their performance? Include relevant vocabulary. Use bullets to sequence your lesson.

• (10-45 min) Finish the distributive practice, with teacher support available as needed.
• (45-85 min) Variables on both sides notes: go through the notes and examples together as a class.

Closure: What will you do to bring closure to the lesson? How will you summarize this lesson and preview the lesson that will follow?

• (85-90 min) Collect the distributive practice and notes.
• Briefly recap the main idea of solving equations with variables on both sides and preview that the next lesson will continue it.

Reflection Guidelines

The student will write lesson plans with an eye to the Danielson Framework and the Four

Domains of Professional Practice. Use this as a resource when writing lesson plans.

Domain I Planning and Preparation

1. How do you know you were knowledgeable of your content?
2. What is the evidence that your objective was clear in the lesson plan?
3. How does the lesson address individual student learning needs?
4. What variety of strategies and methodologies did you consider when planning?
5. What is the evidence that lesson components were logically sequenced?
6. How did your lesson plan include checks for student understanding?
7. What PA Standards did this lesson address?

Domain II Classroom Environment

1. How did students know the behavioral and academic expectations for the lesson?
2. What effective routines and procedures did you implement for lesson efficiency?
3. How did you insure the classroom was physically accessible for all learners?
4. What evidence indicates that respect was shown between and among students and teacher?
5. What evidence indicates that students placed a high value on quality participation, process, and product?
6. How do you assess if the lesson was attainable for all students but also had appropriate rigor?

Domain III Instructional Delivery

1. How did you align your lesson to PA Standards?
2. How did you insure a clearly stated objective, understood by learners?
3. How did you provide clear explanations as to how to proceed through the lesson?
4. What questioning and discussion techniques insured all-learner participation?
5. What strategies did you employ to engage all students?
6. Describe how you made the content meaningful due to sequencing and pacing.
7. Discuss how you checked for understanding, provided feedback, retaught.
8. What is the evidence that you were you flexible and responsive to the needs of the learners?
9. Describe how you made meaning of the lesson with some form of closure activity.

Overall Assessment

Briefly state any changes you will make the next time you teach this lesson or activity, to improve any of the Domains of Professional Practice.
