Lesson Plan Framework

Subject Area: Learning Support Math **Grade Level:** 9th

Student Name: Grace Dittman

<table>
<tr><th colspan="2">Domain I: Planning and Preparation</th></tr>
<tr><td colspan="2">PA Standard(s):
• CC.2.2.8.B.2: Understand the connections between proportional relationships, lines, and linear equations, including slope and y-intercept.</td></tr>
<tr><td colspan="2">Essential Question(s):
Students will consider and reflect on throughout the lesson:
• How can I find the slope and y-intercept from an equation in slope-intercept form?
• What do the m and the b mean in y = mx + b?</td></tr>
<tr><td colspan="2">Objectives/Performance Expectations
What will students know and be able to do as a result of this lesson?
Students will be able to:
• Identify the slope and y-intercept from an equation in slope-intercept form.
• Find the matching slope and y-intercept on their bingo card and cover it with a bingo chip.
• Complete missing assignments.</td></tr>
<tr><td>Assessment Evidence/Level of Learning
Students will show what they know by evidence of/list names of formative or summative checks, quizzes, tests which indicate evidence of learning:
• Formative: Student bingo cards: whether students match each called equation to the correct slope and y-intercept. I check every bingo that is called.
• Formative: Observation and questions during bingo.
• Practice data: Missing assignments completed.</td><td>Differentiated Instruction:
Modifications in instruction and assessment for students with learning differences, specifically those with 504’s and IEP’s.
Extensions/Enrichment in instruction and assessment for students who are above grade level and/or gifted.
• Supports: The visual schedule on the projector shows the plan for the day.
• Content: Students use bingo cards with the answers already on them, so they match instead of writing.
• Process: A random number generator and prizes keep the game fair and fun, and we play multiple rounds so students get more practice.
• Process: Students catch up on missing assignments at</td></tr>
</table>

	their own pace, with my help. • **IEP/504:** Accommodations in each student's IEP/504 plan will be followed.

Domain II: Classroom Environment:

Describe Classroom/Behavior Management Plan & Routines

- Class is shortened to 52 minutes for the half day.
- A visual schedule on the projector shows the plan: slope-intercept bingo, then missing assignments.
- Students cover spaces with bingo chips, and I check any bingo that is called.
- Students get a prize for a correct bingo.
- I help students who need it as they catch up on missing assignments.

Domain III: Instruction

Activate Prior Knowledge/Motivation:

Preparing students for the lesson: How will you activate prior knowledge, build background, or review previous lessons as well as motivate students for the lesson?

Students are practicing slope-intercept form, and a bingo game gives them a fun way to practice reading the slope and y-intercept from equations. Because it is a half day, the plan is simple, with time to catch up on missing assignments.

Materials Needed:

Visual schedule (projector), random number generator (projector), 48 numbered calling cards with equations, bingo cards with 16 spaces, bingo chips, prizes, missing assignments, pencils

Vocabulary (New or Review):

Slope; y-intercept; slope-intercept form; equation; bingo; across; down; diagonal; chip

Sequence of the Lesson:

What learning activities/strategies will you use to engage the students in the learning? What will students do to use and apply new concepts or skills (independent practice if relevant)? How will you monitor and guide their performance? Include relevant vocabulary. Use bullets to sequence your lesson.

Arrival — 52-minute class

- Students see the visual schedule on the projector.
- The plan today is to play slope-intercept bingo and catch up on missing assignments.

Slope-Intercept Bingo (multiple rounds until class is over)

- Each student gets a bingo card with 16 spaces and bingo chips.
- To win a round, a student needs 4 in a row: across, down, or diagonal.
- I have 48 numbered calling cards. Each card has an equation in slope-intercept form (for example, $y = 4x + 5$).
- A random number generator is on the projector. I call out the equation on the card with that number.
- Students look at their card to see if they have the matching slope and y-intercept (for $y = 4x + 5$, slope 4 and y-intercept 5).
- If they have it, they place a bingo chip over the space.
- When a student gets bingo, they call it and I check their card against the equations called.
- A student with a correct bingo gets a prize, and we play another round.

Missing Assignments

- Students also work on catching up on missing assignments, as part of the plan for the day.

Closure: What will you do to bring closure to the lesson? How will you summarize this lesson and preview the lesson that will follow?

At the end of the last round, I ask a volunteer to explain how they found the slope and y-intercept in one equation. I use the bingo checks to see who needs more practice.
Connection to Next Lesson: Students continue practicing slope-intercept form.

Reflection Guidelines

The student will write lesson plans with an eye to the Danielson Framework and the Four Domains of Professional Practice. Use this as a resource when writing lesson plans.

Domain I Planning and Preparation

1. How do you know you were knowledgeable of your content?
2. What is the evidence that your objective was clear in the lesson plan?
3. How does the lesson address individual student learning needs?
4. What variety of strategies and methodologies did you consider when planning?
5. What is the evidence that lesson components were logically sequenced?
6. How did your lesson plan include checks for student understanding?
7. What PA Standards did this lesson address?

Domain II Classroom Environment

1. How did students know the behavioral and academic expectations for the lesson?
2. What effective routines and procedures did you implement for lesson efficiency?
3. How did you insure the classroom was physically accessible for all learners?
4. What evidence indicates that respect was shown between and among students and teacher?
5. What evidence indicates that students placed a high value on quality participation, process, and product?
6. How do you assess if the lesson was attainable for all students but also had appropriate rigor?

Domain III Instructional Delivery

1. How did you align your lesson to PA Standards?
2. How did you insure a clearly stated objective, understood by learners?
3. How did you provide clear explanations as to how to proceed through the lesson?
4. What questioning and discussion techniques insured all-learner participation?
5. What strategies did you employ to engage all students?
6. Describe how you made the content meaningful due to sequencing and pacing.
7. Discuss how you checked for understanding, provided feedback, retaught.
8. What is the evidence that you were you flexible and responsive to the needs of the learners?
9. Describe how you made meaning of the lesson with some form of closure activity.

Overall Assessment

Briefly state any changes you will make the next time you teach this lesson or activity, to improve any of the Domains of Professional Practice.
