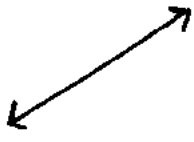
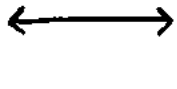
Rate of Change	A ratio that shows how one variable changes with respect to another On a linear graph, this is called the slope of the line!
Slope 	• Slope is written as a ratio of the **vertical change** (rise) to the **horizontal change** (run) between any two points on a line. • This remains constant for any two points on the same line. • Slope is written as a fraction in simplest form. • Variable for slope: m

Types of Slope



Positive	Negative	Zero	Undefined

Finding Slope on a Graph

$$m = \frac{\text{rise}}{\text{run}}$$

Directions: Find the slope of each line. Write your answer in simplest form!

1.  $\frac{7}{4}$

2.  $\frac{-3}{9} = \frac{-1}{3}$

3.  $\frac{0}{4} = 0$

4.  $\frac{5}{0}$ = undef.
