| | work, or finish their multistep color-by-number from the previous class.<br>• **IEP/504:** Accommodations in each student's IEP/504 plan will be followed. |

**Domain II: Classroom Environment**:

Describe Classroom/Behavior Management Plan & Routines

- Students begin with the warm-up on the whiteboard together.
- Students work independently on the review while I circulate to help.
- Students who finish the review hand it in and wait for everyone else, then play the distributive roll-a-dice game with a partner.
- We continue the game after lunch, then students take the quiz.
- Students who finish the quiz stay quiet and take a break or work on other work, such as their color-by-number.

**Domain III: Instruction**

**Activate Prior Knowledge/Motivation:**
Preparing students for the lesson: How will you activate prior knowledge, build background, or review previous lessons as well as motivate students for the lesson?

The warm-up on variables on both sides reviews a skill students have practiced. The review sheet and the examples on the board bring back multistep equations, variables on both sides, and the distributive property before the quiz. The roll-a-dice game makes the practice fun.

**Materials Needed:**

Whiteboard and markers, warm-up equations, review worksheet, distributive roll-a-dice game (dice and game sheets), quiz, multistep color-by-number from the previous class, pencils

**Vocabulary (New or Review):**

Variable; equation; distribute; distributive property; inverse operation; coefficient; constant; solution; check

**Sequence of the Lesson:**
What learning activities/strategies will you use to engage the students in the learning? What will students do to use and apply new concepts or skills (independent practice if relevant)? How will you monitor and guide their performance? Include relevant vocabulary. Use bullets to sequence your lesson.

**Warm-Up (whole class)**

- We work on a variables on both sides warm-up together on the whiteboard.

**Review**

- The review has multistep equations, variables on both sides, and distributive property questions.
- I show examples of each type on the board.
- Students work on the review while I walk around the room to help.

**Distributive Roll-a-Dice Game**

- After every student finishes the review and hands it in, students play the distributive roll-a-dice game with a partner.

**Lunch**

**After Lunch**

- We continue the distributive roll-a-dice game.
- Students take a quiz on the distributive property, variables on both sides, and multistep equations.
- When finished, students quietly take a break or work on other work, including finishing their multistep color-by-number from the previous class if they haven't already.

**Closure**: What will you do to bring closure to the lesson? How will you summarize this lesson and preview the lesson that will follow?

As students finish the quiz, they hand it in and quietly take a break or work on other work. I use the quiz results to see which skills students know and which need more practice.

Connection to Next Lesson: Teacher uses the quiz results to plan the next lesson.

**Reflection Guidelines**

The student will write lesson plans with an eye to the Danielson Framework and the Four Domains of Professional Practice. Use this as a resource when writing lesson plans.

**Domain I Planning and Preparation**

1. How do you know you were knowledgeable of your content?
2. What is the evidence that your objective was clear in the lesson plan?
3. How does the lesson address individual student learning needs?
4. What variety of strategies and methodologies did you consider when planning?
5. What is the evidence that lesson components were logically sequenced?
6. How did your lesson plan include checks for student understanding?
7. What PA Standards did this lesson address?

**Domain II Classroom Environment**

1. How did students know the behavioral and academic expectations for the lesson?
2. What effective routines and procedures did you implement for lesson efficiency?
3. How did you insure the classroom was physically accessible for all learners?
4. What evidence indicates that respect was shown between and among students and teacher?
5. What evidence indicates that students placed a high value on quality participation, process, and product?
6. How do you assess if the lesson was attainable for all students but also had appropriate rigor?

**Domain III Instructional Delivery**

1. How did you align your lesson to PA Standards?
2. How did you insure a clearly stated objective, understood by learners?
3. How did you provide clear explanations as to how to proceed through the lesson?
4. What questioning and discussion techniques insured all-learner participation?
5. What strategies did you employ to engage all students?
6. Describe how you made the content meaningful due to sequencing and pacing.
7. Discuss how you checked for understanding, provided feedback, retaught.
8. What is the evidence that you were you flexible and responsive to the needs of the learners?
9. Describe how you made meaning of the lesson with some form of closure activity.

**Overall Assessment**

Briefly state any changes you will make the next time you teach this lesson or activity, to improve any of the Domains of Professional Practice.
