Practice Worksheet

Absolute Value | Order of Operations | Evaluating Expressions

Name: _____ **Date:** _____ **Block:**_____

Section 1: Absolute Value

Use your calculator to help you solve: MATH - NUM - 1

Example: $|-5| = 5$ because −5 is 5 steps away from 0.

1. $|9| =$

Answer: _____

2. $|-12| =$

Answer: _____

3. $|3 + 6| =$

Answer: _____

4. $|7| - |-8| =$

Answer: _____

Section 2: Order of Operations

Remember PEMDAS: Parentheses → Exponents → Multiply/Divide (left to right) → Add/Subtract (left to right). Use your calculator to help you find the answer.

Example: 3 + 4 × 2 = 3 + 8 = 11

5. (6 + 2) × 3 − 4 =

Answer: _____

6. 20 ÷ 4 + 3 × 2 =

Answer: _____

7. 5^2 − (3 + 7) ÷ 2 =

Answer: _____

8. (8 − 3) × 2 + 6 ÷ 3 =

Answer: _____

Section 3: Evaluating Expressions

*Substitute the given value for the variable, then solve. Put **parenthesis** around all values being substituted.*

Example: If $x = 4$, find $3x + 2$. → $3(4) + 2 = 14$

9. If $x = 5$, find $2x + 3 =$

Answer: _____

Show your work: _____

10. If $y = 3$, find $4y - 7 =$

Answer: _____

Show your work: _____

11. If $a = 2$ and $b = 6$, find $3a + b =$

Answer: _____

Show your work: _____

12. If $n = 4$, find $n^2 - 2n + 1 =$

Answer: _____

Show your work: _____
