Lesson Plan Framework

Subject Area: Learning Support Math **Grade Level: 9**

Student Name: Grace Dittman

Domain I: Planning and Preparation	
PA Standard(s): • CC.2.2.7.EE.A.1 (foundational skill per IEP goals): Apply properties of operations to add, subtract, factor, and expand linear expressions, including combining like terms.	
Essential Question(s): Students will consider and reflect on throughout the lesson: • What makes two terms 'like terms'? • How do we combine like terms to simplify an expression?	
Objectives/Performance Expectations What will students know and be able to do as a result of this lesson? • Students will simplify expressions by combining like terms in a warm-up. • Students will identify and define the parts of a term: coefficient, variable, exponent, and constant. • Students will review and correct a combining like terms practice worksheet from the previous class. • Students will practice combining like terms using a math maze and additional practice problems. • Students will practice foundational math skills independently via IXL for progress monitoring. • Students will review combining like terms through a Gimkit game.	
Assessment Evidence/Level of Learning Students will show what they know by evidence of/list names of formative or summative checks, quizzes, tests which indicate evidence of learning: • Responses to the 5 combining like terms warm-up problems • Completed vocabulary fill-in (coefficient, variable,	**Differentiated Instruction**: Modifications in instruction and assessment for students with learning differences, specifically those with 504's and IEP's. Extensions/Enrichment in instruction and assessment for students who are above grade level and/or gifted.

exponent, constant) • Corrections/participation while reviewing the previous worksheet • Progress and accuracy on the combining like terms maze • IXL progress-monitoring data • Completed additional combining like terms practice • Gimkit performance data	• Materials list and daily schedule posted on the opening slide so students know what to gather and what to expect • Vocabulary slide uses a color-coded example ($4x^2 + 5$) with each part labeled, giving a concrete visual reference for coefficient, variable, exponent, and constant • Previous worksheet reviewed together before new independent work begins • Maze offers a more engaging, lower-pressure format than a standard worksheet • 15-minute timer displayed during IXL to support pacing • Gimkit provides a gamified format with immediate feedback • Teacher support available during all independent practice

Domain II: Classroom Environment:

Describe Classroom/Behavior Management Plan & Routines

• Opening slide displays the materials needed (calculator, pencil, math folder, laptop) and the schedule for the day

• Calming background music video played during independent practice to support focus

• Visible 15-minute timer displayed during IXL

• Clear verbal and visual cues signal transitions, especially around the lunch break

Domain III: Instruction

Activate Prior Knowledge/Motivation:

Preparing students for the lesson: How will you activate prior knowledge, build background, or review previous lessons as well as motivate students for the lesson?

• (0-10 min) Students gather their materials and follow the schedule on the board. Warm-up: 5 combining like terms problems on the slides (e.g., $2x + 3 + 4x - 6$), followed by a vocabulary review using the color-coded example $4x^2 + 5$ (coefficient, variable, exponent, constant).

Materials Needed:

- Slideshow: materials/schedule slide, warm-up problems, vocabulary slide, practice slide, IXL timer slide, Gimkit slide
- Calculator, pencil, math folder, laptop (for each student)
- Vocabulary fill-in sheet (coefficient, variable, exponent, constant)
- Combining like terms practice worksheet from the previous class
- Combining like terms maze
- Additional combining like terms practice
- 15-minute timer video (for IXL)
- Calming background music video (for independent practice)
- Combining like terms Gimkit

Vocabulary (New or Review):

- Coefficient — the number directly next to the variable
- Variable — the letter (e.g., x, y, a, b) in an equation or expression
- Exponent — the small, raised-up number
- Constant — the number that is on its own and does not change in value
- Like terms — review

Sequence of the Lesson:

What learning activities/strategies will you use to engage the students in the learning? What will students do to use and apply new concepts or skills (independent practice if relevant)? How will you monitor and guide their performance? Include relevant vocabulary. Use bullets to sequence your lesson.

- (10-25 min) Review the combining like terms practice worksheet from the previous class together.
- (25-45 min) Pass out the combining like terms maze; students begin working on it before lunch.
- --- LUNCH ---
- (45-60 min) 15 minutes of IXL for progress monitoring, with the timer video displayed.
- (60-75 min) Students complete additional combining like terms practice, with calming background music playing and teacher support available.
- (75-82 min) As students finish, go over the practice worksheet together.
- (82-90 min) Play a combining like terms Gimkit for extra review.

Closure: What will you do to bring closure to the lesson? How will you summarize this lesson and preview the lesson that will follow?

- Collect the maze and practice work (students may finish the maze in a future class if needed).
- Briefly recap how to identify and combine like terms.

Reflection Guidelines

The student will write lesson plans with an eye to the Danielson Framework and the Four Domains of Professional Practice. Use this as a resource when writing lesson plans.

Domain I Planning and Preparation

1. How do you know you were knowledgeable of your content?
2. What is the evidence that your objective was clear in the lesson plan?
3. How does the lesson address individual student learning needs?
4. What variety of strategies and methodologies did you consider when planning?
5. What is the evidence that lesson components were logically sequenced?
6. How did your lesson plan include checks for student understanding?
7. What PA Standards did this lesson address?

Domain II Classroom Environment

1. How did students know the behavioral and academic expectations for the lesson?
2. What effective routines and procedures did you implement for lesson efficiency?
3. How did you insure the classroom was physically accessible for all learners?
4. What evidence indicates that respect was shown between and among students and teacher?
5. What evidence indicates that students placed a high value on quality participation, process, and product?
6. How do you assess if the lesson was attainable for all students but also had appropriate rigor?

Domain III Instructional Delivery

1. How did you align your lesson to PA Standards?
2. How did you insure a clearly stated objective, understood by learners?
3. How did you provide clear explanations as to how to proceed through the lesson?
4. What questioning and discussion techniques insured all-learner participation?
5. What strategies did you employ to engage all students?
6. Describe how you made the content meaningful due to sequencing and pacing.
7. Discuss how you checked for understanding, provided feedback, retaught.
8. What is the evidence that you were you flexible and responsive to the needs of the learners?
9. Describe how you made meaning of the lesson with some form of closure activity.

Overall Assessment

Briefly state any changes you will make the next time you teach this lesson or activity, to improve any of the Domains of Professional Practice.
