Lesson Plan Framework

Subject Area: Learning Support Math **Grade Level: 9**

Student Name: Grace Dittman

Domain I: Planning and Preparation	
PA Standard(s): • CC.2.2.7.EE.A.1 (foundational skill per IEP goals): Apply properties of operations, including the distributive property, to expand and simplify linear expressions.	
Essential Question(s): Students will consider and reflect on throughout the lesson: • How does the distributive property help us simplify an expression? • How do we substitute a value into an expression and then simplify it?	
Objectives/Performance Expectations What will students know and be able to do as a result of this lesson? • Students will practice foundational math skills independently via IXL for progress monitoring. • Students will simplify expressions using the distributive property in a guided warm-up. • Students will complete their distributive property notes and work through the examples. • Students will substitute a value into an expression and simplify it using the distributive property during a partner game. • Students will practice the distributive property on an additional worksheet, with a few problems done together before working independently.	
Assessment Evidence/Level of Learning Students will show what they know by evidence of/list names of formative or summative checks, quizzes, tests which indicate evidence of learning: • IXL progress-monitoring data	**Differentiated Instruction**: Modifications in instruction and assessment for students with learning differences, specifically those with 504's and IEP's. Extensions/Enrichment in instruction and assessment for students who are

• Warm-up responses (4 questions) • Completed distributive property notes and examples • Accuracy shown on whiteboards during the partner dice game (teacher observation) • Progress on the distributive property practice worksheet	above grade level and/or gifted. • Timer displayed during IXL to support pacing and predictability • Warm-up and all notes examples completed together before any independent work • Partner format for the game allows students to support each other • Whiteboards give a low-stakes way to show work and make corrections • Dice game increases engagement and gives students a clear step-by-step routine (roll, substitute, simplify) • Extra practice worksheet is scaffolded: a few problems done together first, then independent work • Teacher support available throughout partner and independent work

Domain II: Classroom Environment:

Describe Classroom/Behavior Management Plan & Routines

• Visual schedule and timer displayed on the board during IXL

• Clear verbal and visual cues signal transitions between activities

• Partner expectations reviewed before the game (take turns rolling, check each other's work)

• Game materials (whiteboards, markers, erasers, roll-a-dice boards, dice) distributed efficiently to each pair

Domain III: Instruction

Activate Prior Knowledge/Motivation:

• (0-15 min) IXL for progress monitoring, with a timer displayed on the board.
• (15-25 min) Distributive property warm-up: students receive a paper with 4 questions, and the class works through them together.

Preparing students for the lesson: How will you activate prior knowledge, build background, or review previous lessons as well as motivate students for the lesson?

Materials Needed:
- Devices for IXL
- Timer (board)
- Distributive property warm-up paper (4 questions)
- Distributive property notes (started last class)
- For each pair of students: a whiteboard, dry-erase marker, eraser, roll-a-dice board, and dice
- Distributive property extra practice worksheet

Vocabulary (New or Review):
- Distributive property — multiplying a number by each term inside parentheses
- Expression — review
- Substitute — replacing a variable with a given number
- Simplify — writing an expression in its simplest form

Sequence of the Lesson:
What learning activities/strategies will you use to engage the students in the learning? What will students do to use and apply new concepts or skills (independent practice if relevant)? How will you monitor and guide their performance? Include relevant vocabulary. Use bullets to sequence your lesson.

- (25-50 min) Finish the distributive property notes started last class. Go through the notes and examples together as a class.
- (50-75 min) Partner game: students get into partners, and each pair receives a whiteboard, marker, eraser, roll-a-dice board, and dice. Students roll the dice, plug the number they land on into the expression, and simplify using the distributive property on their whiteboards.
- (75-90 min) If time allows, hand out a distributive property worksheet for extra practice. Do a few problems together, then let students try on their own.

Closure: What will you do to bring closure to the lesson? How will you summarize this lesson and preview the lesson that will follow?
- Collect notes and any completed worksheets (the worksheet may be finished in a future class if time runs short).
- Briefly recap the steps of the distributive property.

Reflection Guidelines

The student will write lesson plans with an eye to the Danielson Framework and the Four Domains of Professional Practice. Use this as a resource when writing lesson plans.

Domain I Planning and Preparation

1. How do you know you were knowledgeable of your content?
2. What is the evidence that your objective was clear in the lesson plan?
3. How does the lesson address individual student learning needs?
4. What variety of strategies and methodologies did you consider when planning?
5. What is the evidence that lesson components were logically sequenced?
6. How did your lesson plan include checks for student understanding?
7. What PA Standards did this lesson address?

Domain II Classroom Environment

1. How did students know the behavioral and academic expectations for the lesson?
2. What effective routines and procedures did you implement for lesson efficiency?
3. How did you insure the classroom was physically accessible for all learners?
4. What evidence indicates that respect was shown between and among students and teacher?
5. What evidence indicates that students placed a high value on quality participation, process, and product?
6. How do you assess if the lesson was attainable for all students but also had appropriate rigor?

Domain III Instructional Delivery

1. How did you align your lesson to PA Standards?
2. How did you insure a clearly stated objective, understood by learners?
3. How did you provide clear explanations as to how to proceed through the lesson?
4. What questioning and discussion techniques insured all-learner participation?
5. What strategies did you employ to engage all students?
6. Describe how you made the content meaningful due to sequencing and pacing.
7. Discuss how you checked for understanding, provided feedback, retaught.
8. What is the evidence that you were you flexible and responsive to the needs of the learners?
9. Describe how you made meaning of the lesson with some form of closure activity.

Overall Assessment

Briefly state any changes you will make the next time you teach this lesson or activity, to improve any of the Domains of Professional Practice.
