Lesson Plan Framework

Subject Area: Learning Support Math **Grade Level: 9**

Student Name: Grace Dittman

Domain I: Planning and Preparation	
PA Standard(s): • CC.2.2.8.B.3 / 8.EE.C.7 (foundational skill per IEP goals): Solve linear equations in one variable, including equations with variables on both sides and multistep equations. • CC.2.2.7.EE.A.1 (foundational skill per IEP goals): Apply properties of operations to add, subtract, factor, and expand linear expressions, including combining like terms.	
Essential Question(s): Students will consider and reflect on throughout the lesson: • How do we solve an equation when there are variables on both sides? • How can combining like terms help us solve multistep equations?	
Objectives/Performance Expectations What will students know and be able to do as a result of this lesson? • Students will solve equations with variables on both sides in a warm-up and small group practice. • Students will practice foundational math skills independently via IXL recommendations. • Students will review combining like terms through a Gimkit game. • Students will begin taking notes on solving multistep equations.	
Assessment Evidence/Level of Learning Students will show what they know by evidence of/list names of formative or summative checks, quizzes, tests which indicate evidence of learning: • Whiteboard responses during the variables on both sides warm-up • Accuracy and progress on the variables on both sides small group practice	**Differentiated Instruction**: Modifications in instruction and assessment for students with learning differences, specifically those with 504's and IEP's. Extensions/Enrichment in instruction and assessment for students who are above grade level and/or gifted. • Visual schedule lists the materials needed (whiteboard, marker, calculator) so students

• IXL recommendations progress • Gimkit performance data • Multistep equations notes started in class	arrive prepared • Whiteboards give a low-stakes way to show work during the warm-up • Small groups with one teacher per group allow individualized support and pacing • IXL recommendations give students who finish early personalized practice at their own level • Gimkit provides a gamified, low-pressure review with immediate feedback • Multistep equations notes begin only after review and practice of prior skills

Domain II: Classroom Environment:

Describe Classroom/Behavior Management Plan & Routines

• Visual schedule displayed showing today's activities and the materials students need (whiteboard, marker, calculator)

• Clear verbal and visual cues signal transitions, especially into small groups and around the lunch break

• Two teachers, one leading each small group, provide support throughout the work time

• Clear expectation that students who finish early log into IXL recommendations independently

Domain III: Instruction

Activate Prior Knowledge/Motivation:

Preparing students for the lesson: How will you activate prior knowledge, build background, or review previous lessons as well as motivate students for the lesson?

• (0-8 min) Students enter, see the visual schedule listing the materials they need (whiteboard, marker, calculator), and complete a variables on both sides warm-up using their whiteboards.

Materials Needed:

• Visual schedule (board/projector)

- Whiteboards, dry-erase markers, calculators
- Variables on both sides warm-up
- Variables on both sides practice materials (for two small groups)
- Devices for IXL and Gimkit
- Combining like terms Gimkit
- Multistep equations guided notes

Vocabulary (New or Review):

- Variables on both sides — review
- Like terms — review
- Inverse operations — review
- Multistep equation — an equation that takes more than two steps to solve (new)

Sequence of the Lesson:

What learning activities/strategies will you use to engage the students in the learning? What will students do to use and apply new concepts or skills (independent practice if relevant)? How will you monitor and guide their performance? Include relevant vocabulary. Use bullets to sequence your lesson.

- (8-43 min) Split into two small groups, with one teacher per group, to work on variables on both sides. When or if students finish, they log into IXL and work on their recommendations.
- (43-45 min) Wrap up and transition to lunch.
- --- LUNCH ---
- (45-60 min) 15 minutes of IXL recommendations.
- (60-70 min) Combining like terms Gimkit review.
- (70-90 min) Begin multistep equations notes together as a class.

Closure: What will you do to bring closure to the lesson? How will you summarize this lesson and preview the lesson that will follow?

- Before lunch: review main idea of variables on both sides
- Briefly recap the main idea of multistep equations and preview that the next lesson will continue them.

Reflection Guidelines

The student will write lesson plans with an eye to the Danielson Framework and the Four Domains of Professional Practice. Use this as a resource when writing lesson plans.

Domain I Planning and Preparation

1. How do you know you were knowledgeable of your content?
2. What is the evidence that your objective was clear in the lesson plan?
3. How does the lesson address individual student learning needs?
4. What variety of strategies and methodologies did you consider when planning?
5. What is the evidence that lesson components were logically sequenced?
6. How did your lesson plan include checks for student understanding?
7. What PA Standards did this lesson address?

Domain II Classroom Environment

1. How did students know the behavioral and academic expectations for the lesson?
2. What effective routines and procedures did you implement for lesson efficiency?
3. How did you insure the classroom was physically accessible for all learners?
4. What evidence indicates that respect was shown between and among students and teacher?
5. What evidence indicates that students placed a high value on quality participation, process, and product?
6. How do you assess if the lesson was attainable for all students but also had appropriate rigor?

Domain III Instructional Delivery

1. How did you align your lesson to PA Standards?
2. How did you insure a clearly stated objective, understood by learners?
3. How did you provide clear explanations as to how to proceed through the lesson?
4. What questioning and discussion techniques insured all-learner participation?
5. What strategies did you employ to engage all students?
6. Describe how you made the content meaningful due to sequencing and pacing.
7. Discuss how you checked for understanding, provided feedback, retaught.
8. What is the evidence that you were you flexible and responsive to the needs of the learners?
9. Describe how you made meaning of the lesson with some form of closure activity.

Overall Assessment

Briefly state any changes you will make the next time you teach this lesson or activity, to improve any of the Domains of Professional Practice.
