Lesson Plan Framework

Subject Area: Learning Support Math **Grade Level: 9**

Student Name: Grace Dittman

Domain I: Planning and Preparation	
PA Standard(s): • CC.2.2.7.EE.B.4 (foundational skill per IEP goals): Solve real-life and mathematical problems using numerical and algebraic equations, including two-step linear equations. • CC.2.2.7.EE.A.1 (foundational skill per IEP goals): Apply properties of operations to add, subtract, factor, and expand linear expressions, including combining like terms and the distributive property. • Note: verify alignment with individual students' IEP math goals.	
Essential Question(s): Students will consider and reflect on throughout the lesson: • How do we solve two-step equations and combine like terms accurately? • What does the distributive property allow us to do with an expression?	
Objectives/Performance Expectations What will students know and be able to do as a result of this lesson? • Students will solve two-step equations in a warm-up and guided review. • Students will practice two-step equations in a small group setting. • Students will review combining like terms through a Gimkit game. • Students will demonstrate their understanding of two-step equations and combining like terms on a quiz. • Students will begin taking notes on the distributive property.	
Assessment Evidence/Level of Learning Students will show what they know by evidence of/list names of formative or summative checks, quizzes, tests which indicate evidence of learning:	**Differentiated Instruction**: Modifications in instruction and assessment for students with learning differences, specifically those with 504's and IEP's. Extensions/Enrichment in

• Two-step equation warm-up responses • Participation and accuracy during the two-step review and small group practice • Gimkit performance data • Two-step equations and combining like terms quiz • Distributive property notes started in class	instruction and assessment for students who are above grade level and/or gifted. • Two-step equations reviewed whole class and again in small groups before the quiz, scaffolding from supported to independent • Small groups led by two teachers (lead teacher and co-teacher) for more individualized support and pacing • Gimkit provides a gamified, low-pressure review with immediate feedback • Quiz accommodations provided per IEP as needed (e.g., questions read aloud, extended time, calculator use) • Distributive property notes begin only after the quiz, so new content does not compete with quiz preparation

Domain II: Classroom Environment:

Describe Classroom/Behavior Management Plan & Routines

• Visual schedule displayed showing today's activities, including the lunch break and quiz

• Clear transition cues when moving into small groups and into quiz time

• Calm, quiet, focused environment established for the quiz, with expectations reviewed beforehand

• Two teachers in the room allow small groups and individualized support

Domain III: Instruction

Activate Prior Knowledge/Motivation:

Preparing students for the lesson: How will you activate prior knowledge, build background, or review previous lessons as well as motivate students for the lesson?

• (0-10 min) Two-step equation warm-up.

Materials Needed:

• Visual schedule (board/projector)
• Two-step equation warm-up problems
• Two-step equation review materials
• Small group practice materials (one set per group)
• Devices for Gimkit
• Two-step equations and combining like terms quiz

• Distributive property guided notes
• Pencils, calculators

Vocabulary (New or Review):
• Two-step equation, inverse operations — review
• Like terms, coefficient, variable, constant — review
• Distributive property — multiplying a number by each term inside parentheses (new)

Sequence of the Lesson:
• (10-20 min) Two-step equation review together as a class.
• (20-37 min) Split into two small groups to complete the practice work: one group works with the lead teacher and the other works with the co-teacher.
• (37-45 min) Combining like terms Gimkit review.
• --- LUNCH ---
• (45-70 min) Students complete the two-step equations and combining like terms quiz, with accommodations as needed.
• (70-90 min) Begin distributive property notes together as a class.

What learning activities/strategies will you use to engage the students in the learning? What will students do to use and apply new concepts or skills (independent practice if relevant)? How will you monitor and guide their performance? Include relevant vocabulary. Use bullets to sequence your lesson.

Closure: What will you do to bring closure to the lesson? How will you summarize this lesson and preview the lesson that will follow?
• Collect quizzes.
• Briefly recap what the distributive property is and preview that the next lesson will continue it.

Reflection Guidelines

The student will write lesson plans with an eye to the Danielson Framework and the Four Domains of Professional Practice. Use this as a resource when writing lesson plans.

Domain I Planning and Preparation

1. How do you know you were knowledgeable of your content?
2. What is the evidence that your objective was clear in the lesson plan?
3. How does the lesson address individual student learning needs?
4. What variety of strategies and methodologies did you consider when planning?
5. What is the evidence that lesson components were logically sequenced?
6. How did your lesson plan include checks for student understanding?
7. What PA Standards did this lesson address?

Domain II Classroom Environment

1. How did students know the behavioral and academic expectations for the lesson?
2. What effective routines and procedures did you implement for lesson efficiency?
3. How did you insure the classroom was physically accessible for all learners?
4. What evidence indicates that respect was shown between and among students and teacher?
5. What evidence indicates that students placed a high value on quality participation, process, and product?
6. How do you assess if the lesson was attainable for all students but also had appropriate rigor?

Domain III Instructional Delivery

1. How did you align your lesson to PA Standards?
2. How did you insure a clearly stated objective, understood by learners?
3. How did you provide clear explanations as to how to proceed through the lesson?
4. What questioning and discussion techniques insured all-learner participation?
5. What strategies did you employ to engage all students?
6. Describe how you made the content meaningful due to sequencing and pacing.
7. Discuss how you checked for understanding, provided feedback, retaught.
8. What is the evidence that you were you flexible and responsive to the needs of the learners?
9. Describe how you made meaning of the lesson with some form of closure activity.

Overall Assessment

Briefly state any changes you will make the next time you teach this lesson or activity, to improve any of the Domains of Professional Practice.
