Gwynedd Mercy University-School of Business & Education
(*Must be used for each lesson observed by University Supervisor*)
Lesson Plan Framework

Subject Area: Learning Support Math **Grade Level: 9**

Student Name: Grace Dittman

<table>
<tr><th colspan="2">Domain I: Planning and Preparation</th></tr>
<tr><td colspan="2">PA Standard(s):

• CC.2.2.7.EE.B.4 (foundational skill per IEP goals): Solve real-life and mathematical problems using numerical and algebraic equations, including one-step and two-step linear equations.</td></tr>
<tr><td colspan="2">Essential Question(s):
Students will consider and reflect on throughout the lesson:

• How do we solve one-step and two-step equations?

• How can working in a small group support our understanding of multi-step problems?</td></tr>
<tr><td colspan="2">Objectives/Performance Expectations
What will students know and be able to do as a result of this lesson?

• Students will solve one-step equations as a warm-up/review.

• Students will review vocabulary: one-step equation, two-step equation, inverse operations.

• Students will take guided notes on solving two-step equations.

• Students will practice solving one-step and two-step equations together as a class.

• Students will work in a small group to practice two-step equations, progressing from guided to independent practice.</td></tr>
<tr><td>Assessment Evidence/Level of Learning
Students will show what they know by evidence of/list names of formative or summative checks, quizzes, tests which indicate evidence of learning:

• One-step equation warm-up responses

• Vocabulary review responses

• Completed guided notes on two-step equations</td><td>Differentiated Instruction:
Modifications in instruction and assessment for students with learning differences, specifically those with 504's and IEP's. Extensions/Enrichment in instruction and assessment for students who are above grade level and/or gifted.

• Guided notes and practice sheet completed together as a class before students are</td></tr>
</table>

• Completed whole-group 1-step/2-step practice sheet • Small group practice accuracy and progress toward independent work	released to small groups, scaffolding from supported to independent practice • Small group breakout allows more individualized pacing and support • Gradual release within small groups: students work together first, then transition to independent work, with help provided as needed • Vocabulary reviewed again to reinforce retention from the prior lesson

Domain II: Classroom Environment:

Describe Classroom/Behavior Management Plan & Routines

• Visual schedule displayed showing today's activities

• Clear transition cues when moving from whole-class instruction into small groups

• Small groups supported by available staff to allow individualized help

• Consistent routine carried over from the prior two-step equations lesson

Domain III: Instruction

Activate Prior Knowledge/Motivation:

Preparing students for the lesson: How will you activate prior knowledge, build background, or review previous lessons as well as motivate students for the lesson?

• (0-10 min) One-step equation warm-up.
• (10-15 min) Review vocabulary: one-step equation, two-step equation, inverse operations.

Materials Needed:

• One-step equation warm-up sheet
• Vocabulary review materials
• Two-step equation guided notes
• 1-step and 2-step equation practice sheet
• Small group practice materials/worksheets
• Pencils, calculators

Vocabulary (New or Review):

• One-step equation — review
• Two-step equation — review
• Inverse operations — review

Sequence of the Lesson:
What learning activities/strategies will you use to engage the students in the learning? What will students do to use and apply new concepts or skills (independent practice if relevant)? How will you monitor and guide their performance? Include relevant vocabulary. Use bullets to sequence your lesson.

- (15-35 min) Work through two-step equation notes together as a class.
- (35-55 min) Complete a 1-step and 2-step equation practice sheet together as a class.
- (55-90 min) Break into two small groups to continue practicing two-step equations. Work together as a group at first, then transition students to working independently, providing help as needed.

Closure: What will you do to bring closure to the lesson? How will you summarize this lesson and preview the lesson that will follow?
- Collect any completed small group work.
- Briefly recap the steps for solving one-step and two-step equations.

Reflection Guidelines

The student will write lesson plans with an eye to the Danielson Framework and the Four Domains of Professional Practice. Use this as a resource when writing lesson plans.

Domain I Planning and Preparation

1. How do you know you were knowledgeable of your content?
2. What is the evidence that your objective was clear in the lesson plan?
3. How does the lesson address individual student learning needs?
4. What variety of strategies and methodologies did you consider when planning?
5. What is the evidence that lesson components were logically sequenced?
6. How did your lesson plan include checks for student understanding?
7. What PA Standards did this lesson address?

Domain II Classroom Environment

1. How did students know the behavioral and academic expectations for the lesson?
2. What effective routines and procedures did you implement for lesson efficiency?
3. How did you insure the classroom was physically accessible for all learners?
4. What evidence indicates that respect was shown between and among students and teacher?
5. What evidence indicates that students placed a high value on quality participation, process, and product?
6. How do you assess if the lesson was attainable for all students but also had appropriate rigor?

Domain III Instructional Delivery

1. How did you align your lesson to PA Standards?
2. How did you insure a clearly stated objective, understood by learners?
3. How did you provide clear explanations as to how to proceed through the lesson?
4. What questioning and discussion techniques insured all-learner participation?
5. What strategies did you employ to engage all students?
6. Describe how you made the content meaningful due to sequencing and pacing.
7. Discuss how you checked for understanding, provided feedback, retaught.
8. What is the evidence that you were you flexible and responsive to the needs of the learners?
9. Describe how you made meaning of the lesson with some form of closure activity.

Overall Assessment

Briefly state any changes you will make the next time you teach this lesson or activity, to improve any of the Domains of Professional Practice.
