Lesson Plan Framework

Subject Area: Learning Support Math **Grade Level:** 9th

Student Name: Grace Dittman

Domain I: Planning and Preparation	
PA Standard(s): • **CC.2.1.7.D.1:** Analyze proportional relationships and use them to solve real-world and mathematical problems. • **Absolute value:** Understand absolute value as the distance of a number from zero on a number line.	
Essential Question(s): Students will consider and reflect on throughout the lesson: • How can I use a proportion to find a missing number? • What does absolute value tell me about a number? • How can I check that my answer makes sense?	
Objectives/Performance Expectations What will students know and be able to do as a result of this lesson? Students will be able to: • Complete their IXL benchmark and practice their IXL recommendations. • Solve proportion problems with support, beginning with warm-up questions done together. • Copy absolute value notes and work through examples together. • Complete a proportions practice worksheet independently.	
Assessment Evidence/Level of Learning Students will show what they know by evidence of/list names of formative or summative checks, quizzes, tests which indicate evidence of learning: • **Diagnostic:** IXL benchmark. • **Practice data:** IXL recommendations. • **Formative:** Student answers on the proportions warm-up as we go through it together. • **Formative:** Student answers on the absolute value examples. • **Formative:** Proportions practice worksheet, with my observation and help as I circulate.	**Differentiated Instruction**: Modifications in instruction and assessment for students with learning differences, specifically those with 504's and IEP's. Extensions/Enrichment in instruction and assessment for students who are above grade level and/or gifted. • **Time:** Students take as much time as they need on the benchmark. • **Process:** Students who finish the benchmark work on their IXL recommendations until everyone is done. • **Content:** Students get a paper copy of the warm-up questions to follow along with the board.

	• **Process:** We do the examples on the notes together on the board. • **Process:** I circulate to help during the worksheet. • **Small group/individual support:** My cooperating teacher pulls students one by one for extra help with proportions. • **IEP/504:** Accommodations in each student's IEP/504 plan will be followed.

Domain II: Classroom Environment:

Describe Classroom/Behavior Management Plan & Routines

- Students enter and begin their IXL benchmark right away, with as much time as they need.
- Students who finish work quietly on IXL recommendations until everyone is done.
- We do the proportions warm-up together on the board, and students follow along on paper.
- Notes are continued after lunch.
- During the worksheet, I circulate and my cooperating teacher works with students one at a time.

Domain III: Instruction

Activate Prior Knowledge/Motivation:

Preparing students for the lesson: How will you activate prior knowledge, build background, or review previous lessons as well as motivate students for the lesson?

Students begin with IXL, which they already use. The proportions warm-up reviews a skill students have seen, and doing it together on the board helps them see each step. The warm-up gets students ready for the proportions worksheet later in the lesson.

Materials Needed:

Student devices for IXL, proportions warm-up (4 questions, paper copies), board, absolute value notes, proportions practice worksheet, paper and pencils

Vocabulary (New or Review):

Ratio; proportion; equivalent; cross multiply; absolute value; distance; zero; number line

Sequence of the Lesson:

What learning activities/strategies will you use to engage the students in the learning? What will students do to use and apply new concepts or skills (independent practice if relevant)? How will you monitor and guide their performance? Include relevant vocabulary. Use bullets to sequence your lesson.

IXL Benchmark

- Students come in and take their IXL benchmark.
- They have as much time as they need.
- When they finish, they work on their IXL recommendations until everyone is done.

Proportions Warm-Up — about 8–10 minutes

- We do 4 proportion questions together on the board.
- Each student gets a paper copy of the questions to follow along.

Absolute Value Notes

- We begin the absolute value notes.
- We do the examples on the notes together on the board.

Lunch

After Lunch

- We continue the absolute value notes and the examples on the board.
- Students work individually on a proportions practice worksheet.
- I circulate to help.
- My cooperating teacher pulls students one by one for extra help with proportions.

Closure: What will you do to bring closure to the lesson? How will you summarize this lesson and preview the lesson that will follow?

At the end of class, I ask students to tell me what absolute value means and one step they used to solve a proportion. I look at the worksheets to see who needs more practice.
Connection to Next Lesson: Students continue practicing proportions and absolute value.

Reflection Guidelines

The student will write lesson plans with an eye to the Danielson Framework and the Four Domains of Professional Practice. Use this as a resource when writing lesson plans.

Domain I Planning and Preparation

1. How do you know you were knowledgeable of your content?
2. What is the evidence that your objective was clear in the lesson plan?
3. How does the lesson address individual student learning needs?
4. What variety of strategies and methodologies did you consider when planning?
5. What is the evidence that lesson components were logically sequenced?
6. How did your lesson plan include checks for student understanding?
7. What PA Standards did this lesson address?

Domain II Classroom Environment

1. How did students know the behavioral and academic expectations for the lesson?
2. What effective routines and procedures did you implement for lesson efficiency?
3. How did you insure the classroom was physically accessible for all learners?
4. What evidence indicates that respect was shown between and among students and teacher?
5. What evidence indicates that students placed a high value on quality participation, process, and product?
6. How do you assess if the lesson was attainable for all students but also had appropriate rigor?

Domain III Instructional Delivery

1. How did you align your lesson to PA Standards?
2. How did you insure a clearly stated objective, understood by learners?
3. How did you provide clear explanations as to how to proceed through the lesson?
4. What questioning and discussion techniques insured all-learner participation?
5. What strategies did you employ to engage all students?

6. Describe how you made the content meaningful due to sequencing and pacing.
7. Discuss how you checked for understanding, provided feedback, retaught.
8. What is the evidence that you were you flexible and responsive to the needs of the learners?
9. Describe how you made meaning of the lesson with some form of closure activity.

Overall Assessment

Briefly state any changes you will make the next time you teach this lesson or activity, to improve any of the Domains of Professional Practice.
